

**Amendments to the Specification:**

*Please amend the paragraph (section) beginning on page 5, at line 9 as shown below:*

Suitable ethylenically unsaturated, silane-containing monomers b) are also (meth)acrylamides which contain silane groups, for example those of the general formula  $\text{CH}_2=\text{CR}^5\text{-CO-NR}^6\text{-R}^7\text{-SiR}^8_m\text{-(R}^9\text{)}_{3-m}$ , in which  $m = 0$  to  $2$ , each  $\text{R}^5$  is independently either H or a methyl group, each  $\text{R}^6$  is independently H or an alkyl group having 1 to 5 C atoms; each  $\text{R}^7$  is independently a  $\text{C}_{1-5}$  alkylene group or a bivalent organic group in which the carbon chain is interrupted by an O or N atom, each  $\text{R}^8$  is independently a  $\text{C}_{1-5}$  alkyl group, and each  $\text{R}^9$  is independently a  $\text{C}_{1-40}$  alkoxy group which may be substituted by further ~~heterocycles~~ heteroatoms, preferably O, N, S, or P. In monomers in which 2 or more  $\text{R}^5$  or  $\text{R}^9$  groups occur, these may be identical or different.
